The Technology for successful STO events.

The road to zero delay

To avoid any delay on a STO event, and the cost overrun that goes with it, three things are essential:

1. Passionate and competent **People**

2. Powered by fit for purpose **Technology**

3. Supported by a proven **Methodology**

People

Methodology

ADVANDO

Our passionate people work every day for what we believe in: *future-proof industries.*

Along the way we live by our values. We work hard but smart, grow as individuals as well as a team and most importantly: we have fun with what we do and celebrate every success!

Back to Business

Over 70% of all STO events suffer considerable delays. And yet, asset owners want to be back online as soon as possible.

Developed for and by practitioners

With over 30 years of experience our practitioners decided to build their own technology. No existing solution could meet their demands. Clear communication, visual transparency and responsibility, real-time information & data accessible for hundreds of people involved will lead to effective team collaboration, appreciation and in the end to a STO event with Zero Delay.

How does TACS work

Every STO event is effectively managed and monitored. Clear dashboards give insights and more grip on the event.

Is a task completed? The practitioner responsible can indicate this himself on the touchscreen. Everyone registered can update the status, view the daily planning, and even consult a complete work package with work breakdown, photos, and drawings. TACS takes changes into account so pro-active adjustments can continuously be made. And always gives insight into the current status of the critical paths and lookahead activities.

For more involvement and ownership on the floor
Every registered user can see the status of the scope on the touchscreen: View the status of the scope

Request a complete work package with work analysis, photos and drawings, etc. Update the current status and compile the daily schedule

Designed to push the pace
TACS 2.0 is fit-for-purpose. Developed based on the needs of turnaround practitioners. They can get to work with it intuitively. The user adoption rates are therefore far above average. TACS 2.0 enables the whole team to keep the overview, avoid delays and speed up. All together, on the road to zero delay.

Easier management and monitoring
Compatible with all scheduling software
Easily accessible and user-friendly
Always up-to-date
